Profile Summary

Aspiring Software Developer with experience in Java, Spring Boot, ReactJS, and REST API development. Built full-stack and SaaS-based projects with authentication, role-based access control, and database integration. Strong foundation in DSA, OOP, DBMS, and Computer Networks with a focus on writing clean and scalable code.

Key Skills

- **Programming Languages :** Java, JavaScript, Python, MySQL
- **Frameworks :** Spring MVC, **SpringBoot**, Spring Data JPA, RestAPI, ReactJS, NodeJs
- **Cloud & Deployment :** AWS(EC2, S3, VPC), Docker
- **Core Concepts:** Data Structure and Algorithm, Machine Learning, Computer Networks, DBMS

Education Profile

B Tech in Computer Science (AI)	2023-Present
Parul Institute of Engineering and Technology :	CGPA : 8.2
Leo International School, Banswara, Rajasthan	2022 (HSC - 89%)

Projects

1. Multi-Tenant SaaS Project Management | Feb 2025 - Present

Tech Stack: Java, Spring Boot, Spring Security, JWT, Hibernate/JPA, PostgreSQL, H2, REST APIs

- Developed a multi-tenant SaaS app with secure tenant-based data isolation
- Implemented JWT authentication and role-based access control (RBAC)
- Built REST APIs for project/task management with pagination and filtering
- Designed tenant-aware APIs using Spring Boot and PostgreSQL

Github Repo : github.com/tanishjain09/Multitenant-saas-product-and-task-management-backend

2. HeartAI – Heart Disease Prediction System | May 2025 [link : heartai-tanish.vercel.app/]

Tech Stack: Python, Flask, React, Scikit-learn, XGBoost, SMOTE, Pandas, Docker, Gunicorn, Vite

- Developed a heart disease prediction system using 11 clinical features for real-time risk scores
- Trained 5 ML models with hyperparameter tuning, achieving 85%+ accuracy and 0.86+ ROC-AUC scores
- Engineered 4 custom features and used oversampling (SMOTE) to clean and process 918 patient records
- Designed a responsive UI with a 3-step form and risk gauge; integrated Docker and automated tests

Github : github.com/tanishjain09/HeartAI

3. SmartCampus – Campus Complaint Management System | Feb 2025

Tech Stack: Node.js, Express, React, MongoDB, Mongoose, JWT, Cloudinary, Multer, Vite

- Built a campus complaint portal with JWT authentication supporting student, staff, and admin roles
- Created a background cron job to auto-escalate priority and extend deadlines for overdue issues
- Configured MongoDB text indexes to enable instant search across titles, descriptions, and locations
- Designed an analytics dashboard showing average resolution hours, priority stats, and issue trends

GitHub Repo: github.com/tanishjain09/Smart-Campus-

Certifications

- Spring 6 & Spring Boot 3 Udemy — December 2025
- Computer Networks and Internet Protocol NPTEL — June 2025
- RestAPI HackerRank — December 2025
- Problem Solving (Intermediate) HackerRank — December 2025
